

Iowa Land Improvement Contractors Survey

Background:

In January 2013, Agren surveyed land improvement contractors attending the Iowa LICA Annual Meeting and Convention in Des Moines, Iowa. A total of 47 individuals provided comments about the number of structures they build per year and the number built without NRCS cost share or design assistance. They were also asked if they currently have machine/blade control technology, and about their future plans for acquiring the technology in the coming years. A summary of their responses can be found on the following pages.

Percent of structures built with and without NRCS design assistance

If electronic design files for machine/blade control were available for waterways and ponds, would you purchase machine/blade control technology sooner?
